English Book Notes 2 Reviews paul martin July 02, 2016 Great book. Written in an easy to understand and fun style, this book takes a much needed look at the topic of food allergies and sensitivities.Malaria Parasite Found A newly discovered strain of the malaria parasite – a parasite that infects and kills people all over the world – is causing trouble for Australian soldiers in the Iraq War. The 'hyperparasitoid', a parasite that evolves by taking over other parasites, has wreaked havoc with the lifecycle of the common mosquito-borne parasite in Australia, known as the malaria parasite. A global health experts, Professor Alan Howard and Associate Professor Mark Paterson, have been researching the development of the parasite. They have found it is the hyperparasitoid that is causing trouble for the malaria parasite, and by understanding how it developed they are developing new ways to control the parasite. The researchers found that the malaria parasite used the hyperparasitoid as a host, as its lifecycle depends on the death of this parasite. The hyperparasitoid was taken over by the malaria parasite and developed a new way of reproducing. One of the main targets of the new research is to develop drugs to kill the hyperparasitoid parasite. And, as the toxic symptoms of the hyperparasitoid are close to identical to the symptoms of malaria, the new research could lead to new drug treatments for the malaria parasite.Q: Push Notification on iOS (Ad Hoc) with sqflite I'm currently developing a native iOS app using the sqflite library (www.github.com/square/sqflite). I need to send a push notification when a user start a new activity on the app. I already wrote a service in java that receive a user id and push a notification to this user. I would like to achieve the same result using sqflite. I already read the documentation on the official sqflite site: sqflite push notification documentation I didn't find any example on how to achieve what I need. Thanks A: solution for me was quite simple. Using Cloud Messaging service from Google Also my GitHub account link is at the end of the
