The Photos app feels a bit more streamlined now, although it can still be slow. Now it has tabs for your photos, albums, and camera roll. Photos are organized in singular, groups, and collections. The collection feature is something new, and this is great for sharing. You can now view your collection as a "ring," which makes it easier to see items of interest at a glance. In addition, it is easier to organize your photos in folders and some smart import options have been added, including the ability to import camera roll directly in to the Photos app on iPad. It is my opinion that Lightroom is the ultimate workflow system for photographers. Once you start using the software, you are going to be an evangelist and tell every photographer you know about it. It is incredibly easy to learn and it is robust in terms of the number of places it handles all of your photo process, yet it is powerful enough to cope with any type of photographer. One of the beauties of Lightroom is its ability to scale easily to any size or pixel count. For many users, the learning curve is short and they can start making strides as they use the system. Just as with the Adobe edition, the level of support is excellent and it can be as user friendly or as intuitive as you find comfortable. You can move images from Lightroom into Photoshop if you wish and vice versa, and there are a plethora of macro and other tools to help to speed your work. It takes a very long time to make it from a raw image into a finished sheet of photographic work.

After our video was released, we received some great feedback on the features we showed, and have already started to rethink and redesign some of these features. Some of the most common suggestions we've seen are located on the Photoshop blog (http://blogs.adobe.com/photoshop).
