Creative Cloud is the most complete version of Photoshop in the history of the program. It can be intimidating for someone who hasn't used Photoshop before, but offers way more than simply offering a consumer replacement for Photoshop . I can think on a regular bases about what new features are available, and the updated UI and organization and smart new features make for a seamless transition into a full-fledged professional digital photo editing workflow. First, let's talk about the basics: The app's UI was made to be fast and easy and provide an escape from the traditional photo editing workflow. On a large screen Photoshop is a welcoming experience. With the new Performance Mode in Photoshop CC 2015, the app feels faster and easier to use than ever. It also provides a better way of managing digital assets, syncing and transferring them, and sharing them. New features like phantoms and the ability to edit raw images side-by-side make the app a strong competitor in the increasingly popular mobile photo editing workflow. Photoshop users who have fallen out of love with the more traditional fixed-pixel-grid editing system can use Camera Raw to open photos in the direction of their choice: fixed perspective (cameras most users own already have this setting, but Camera Raw makes it obvious) or adjustable perspective. This allows users to zoom and crop right out to the edge of the frame, making even more room for detail work. Layout options for images are a boon to photo editing - especially as the action system for all layers is greatly improved.

However, the effort to bring PSD files to the web required many team members and engineers from various parts of our company. It was not a trivial undertaking and many more projects were required before the initial steps were completed. We could not bring the PSD files directly to the web because they were not compatible with browsers that were used at the time. While the technology is rapidly changing and many developers and engineers are striving to make the PSD files compatible, we also need to make sure our designers are ready to work on the web. e3d0a04c9c
