You can download programs such as Photoshop Elements (www.adobe.com/products/photoshop-elements.html) for casual use or use a number of free software alternatives such as GIMP (www.gimp.org). Killing image files Photoshop's destructive editing tools are designed to help you get rid of certain features that can be unsightly, such as the hair, moles, or other distracting elements that may appear in your subject's face, clothing, or other features. Although Photoshop offers many helpful features, it can be a very expensive program if you want the program to do all the functions that it does, so make sure that you know exactly what you want to do before you purchase the program. Images in Photoshop are made up of a series of layers (layers are explained in the next section). The aim of this feature is to help you keep track of what is on top of what to make sure that you don't accidentally pick up what you were aiming to erase from your image. For example, say that you are trying to capture a shot of your daughter's face. You can use the Eraser tool to remove the hair covering her face, but if you apply the Eraser tool, you may remove her pretty face and the image will have nothing that you want to keep. In Figure 3-9, the hair around the girl's face is on a layer that is sitting on top of the image. If you were to erase the hair, you would be removing the hair on the layer below. **Figure 3-9:** You can edit one image by working on the layers beneath it. The key to working with layers is to make sure that you separate them from the image. You can do so in a number of different ways. On the Layers panel, shown in Figure 3-10, you can check or uncheck the visibility of each layer. It is helpful to use this method of working to keep track of what layers are visible to save time. **Figure 3-10:** Edit layers by checking or unchecking the visibility of each one. To access layers, click on the layer you want to edit and then select the Layers option from the fly-out menu, as shown in Figure 3-11. A separate image window will appear, as shown in Figure 3-12, where you can now see the layers as well as

Q: Should I use a reference for non-const variables? Basically I have a class that has a lot of non-const member variables. Currently I'm declaring them like this: `class MyClass { public: MyClass(); ... void SetVariable(const int n); private: int n; ... }` And then when I'm doing certain operations on the class I make sure to declare them as const because the compiler still allows them to be modified (and before anyone mentions it, yes, I know that in C++ you shouldn't modify variables). My question is, is this a good way to do it? For instance, I'm passing by reference to functions that I want to modify them in the function itself. So, would it be better to just declare the variable as const and let the compiler prevent it? A: What you're doing is fine. It is the C++ standard. It is guaranteed by the C++ standard that once you modify a const object via a const reference or pointer, it is not modified by subsequent actions. The only actions which may damage a const object are modification by a reference or pointer to a non-const object. A: It's safe to do. If you want to make sure that no one tries to modify your object accidentally or maliciously, then you should make it const. Otherwise, it's OK. Credit:Mike Derer Mississauga Mayor Bonnie Crombie says public works projects did not factor into the decision to opt for the more expensive option. She says at no time was council given the opportunity to discuss the project with the public, despite the expense, and multiple meetings have been scheduled with the various levels of government to address the matter. In a letter sent to Crombie on March 14, Grant Harrison, Mississauga's chief administrative officer, stated that preliminary discussions between the city's General Manager of Planning, Stephen Hague, and Peel's Planning and Development Director of Land Services, Chris Phinney, have led to the conclusion that public works projects are not within Mississauga's limited departmental resources. Credit:City of Mississauga The letter states that the city plans to submit a report to council on what can be done within the scope of Mississauga's current resources. "The City's decision is based on its priorities, a fact that cannot be changed regardless of circumstances," wrote Harrison. Crombie insists that she had no idea that \$15 million was being spent on the project, which some councillors have estimated could cost as much as \$20 million. Crombie says the decision has left her as mayor "shocked" and "disappointed," and she's looking for some answers. Crombie says in a report to council in September 2014, Mississauga's general manager of economic development, Gail Jolson, planned to work with then-councillor and member of the public works committee, Tim Hudak, to "identify a series of multimillion-dollar public works projects that could be in Mississauga's best interest."
