My team has been using Wix to make websites for quite some time. As the marketing team for Wix, we keep in touch with our customers and are also responsible for keeping them up to date on what's new. There are a lot of topics we cover, but there's only one that I want to focus on right now. This is about a particular product and if you'd like to know more about it, take a look. The product in question is a font management software that runs on Windows. It's called FontBase, and it

was released about 3 years ago. It's a nice product that lets you organize, edit, find, and compare fonts. If you're working with a designer on a project, you'll find that this is really useful. Because of its uniqueness and ease of use, it's also one of the most popular products on Wix. It's far from being a tool that's only used in the marketing and sales department. So, I'm going to take a look at this in detail and tell you everything that's available. Install First of

FontBase Crack+

FontBase is a straightforward and smooth-running piece of software designed to make it as easy as possible for you to organize and edit fonts. Subsequent to its surprise-free installation process, you are greeted by a simplistic main window with most of the app's features on display. User-friendly utility for organizing and editing fonts Interface-wise, there is not much to be said, as the app is designed to be as streamlined and as easy to use as possible. However, we would like to point out that the app emulates an OS X-specific interface, a fact that some Windows users might find a bit odd. FontBase offers a quick way to change the color, background, size, height and alignment of your fonts. As expected, besides the predefined packages of fonts, you can also create custom collections or take advantage of the recently added and favorites sections included in the app. Easily accessible features It also provides you with a fast way to search for your fonts and an easy method of comparing two fonts by pinning one to the top. Also noteworthy is the fact that the software solution features a live text editing capability that enables you to view changes done to your fonts in real time. As far as improving your workflow, FontBase enables you to search, edit, and change the font sizes with the help of keyboard and mouse shortcuts. Simply press CTRL + F to activate the search function, Enter for live text editing and use the combination of CTRL + mouse scroll for font size adjustments. Simple yet efficient font manager While in a very early development stage and despite the fact that it almost looks like an OS X app, FontBase runs quite smoothly and proved to be quite stable on our Windows-based testing machines. Therefore, if you are looking for a no muss, no fuss font manager, you should give FontBase a quick spin and see if it fits your needs. Since version 1.5.0, FontBase has a new search feature, which means that all of the new search results are being added right away. So you no longer need to press the Enter button for the new results to appear. This new way of searching is not the only difference. The new version also has a new look and feel. It is now based on an in-house developed theme. This means that the UI elements look more similar to the OS X app, instead of having a Windows 95 look. What's New in the?

Easy to use and convenient tool for organizing, managing and editing fonts in multiple formats. Also, it allows you to generate all sorts of font combinations and produces true type fonts of all sizes. Thanks mohammad_cantor (18.04.2012 03:13) I agree with the previous reviews. This is a good font manager. But there is no way to pin the fonts on the Desktop or taskbar. I have this problem. FILED NOT FOR PUBLICATION MAR 14 2012 MOLLY C.
