GPS Utility Import File Converter is an advanced software utility that enables you to convert GPS data into files with the.txt or.csv format and ready them for GPS Utility. It comes loaded with a bunch of options and configuration properties that mostly target experienced users. Setting up this tool is an uncomplicated task that's over in just a few seconds. At launch, it brings up a classical-looking panel with a seemingly cluttered structure that represents GPS Utility Import File Converter's interface. Customize the GPS conversion mode You can begin by selecting the output type between waypoints, waypoints and routes, or trackpoints. It's possible to edit settings regarding IDs, comments, the grid type, first and last record, coordinate format, along with the easting and northing alignment. What's more, you can break lines, preview information in the main application window before converting files, as well as set the format for the date and time, along with the list and decimal separators. These are just part of the configurable settings provided by this program. They can be saved to.ini files and imported later or on another computer running GPS Utility Import File Converter. Evaluation and conclusion We haven't come across any stability issues in our tests, thanks to the fact that the app didn't hang, crash or prompt error messages. It had a good response time and finished conversion jobs rapidly while remaining light on computer performance, running low CPU and RAM. On the other hand, GPS Utility Import File Converter isn't that intuitive for inexperienced users. Otherwise, it sports practical options and methods of app customization to turn GPS-formatted files into more user-friendly types. Text To Speech, one of the most popular and used software solutions, is more than a simple text to speech program. Text To Speech offers a wide range of functions to make use of its capabilities in a different manner. Text To Speech can convert not only messages into speech, but also email and web forms. It does not interfere with other programs, which makes it the ideal tool for people who have difficulties with using the mouse or keyboard. With its simple interface and fast working principles, you can easily adjust the text message to voice ratio, speed, and even the amount of speech. Text To Speech, along with text to speech programs, is not only a portable software application, but also a robust solution to make use of the capabilities in the vast majority of programs. With the help of Text To Speech, you can make use of online services, programs, and websites with no problems. Advantages of being portable Portability is the main advantage of the Text To Speech software. Thanks to its small size, you are free to copy it to a flash drive or any other device, which makes it possible to work with the program even when the computer is not running. Text To Speech is a small software application whose purpose is to help you convert user-defined text messages to speech. The advantages of being portable Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to make use of text-to-speech capabilities on the breeze, without having to go through installation steps. Simplistic looks Text To Speech embeds all dedicated parameters into the main window, so you can easily make the necessary voice adjustments. You can type in the text message directly into the primary panel or paste the information from the clipboard. Speaking capabilities The tool gives you the possibility to choose the desired voice from a drop-down list, alter the speed, and adjust the volume. Basically, it proves to be nothing more than a child's play to work with this program, as you only need to press on the "Speak" button, and it automatically converts the text to speech. Performance Tests have shown that Text To Speech carries out a task pretty quickly and provides very good audio quality. It leaves a minimal footprint on system resources, so the overall performance of the computer is not burdened

Q: Number of ways to select n items from r objects without replacement. How many

ways are there to select n items from r objects without replacement? Let r_i be the number of ways to select i of the r objects, for $i=0,1,\ldots,n$. Let $R = r_0 + r_1 + \ldots + r_n$. The answer that I came up with is $R(R+1)\cdots(R+n)$. But this answer is not correct because I could only manage to get the following equation. $\left[\binom{R+n}{R} \right] \left[\binom{R+n-1}{R} \right] \ldots \left[\binom{R+1}{R}\right]$ Is there any way to simplify my expression to obtain the correct answer? A: Suppose that you want to choose r objects out of a total of $R+r$. For a given choice of the r objects, you can choose n of them in $\binom{R+r}{n}$ ways. Then, you can choose which of the n objects to select for the first slot in $\binom{R+n}{n}$ ways. In general, you can choose for the ith slot in $\binom{R+n-i}{n-i}$ ways, then choose which of the remaining $n-i$ slots to select for in $\binom{R+n-i}{R-i}$ ways, and so on, so that altogether you can make $\binom{R+n}{R}$ choices. Critical amino acid residues for the interaction between alpha-bungarotoxin and alpha-neurotoxins of cone snails. The binding between a chimeric alpha-bungarotoxin (alpha-BGT) and alpha-neurotoxins (alpha-NTx) from two different cone snails, Conus imperialis and C. striatus, has been characterized. alpha-BGT and alpha-NTx belong to the same family of toxins which are known to be responsible for postsynaptic transmission of the neurotransmitter acetylcholine. The chimeric toxins
