### **What's New In James 039; Network Reconnector?**

James' Network Reconnector is a small, easy to use application written in C#, designed to find all the network adapters and to give you the option do disconnect and then reconnect each one. With James' Network Reconnector, the task at hand translates to one or three

mouse clicks, depending on whether to desired network adapter is already selected when you start the program or not. With this tool, you can also disconnect and reconnect to most of the standard interfaces, including wireless, including the standard LAN adapters, and then reboot, restart or shutdown, that is the perfect addition to any standard computer system. Usage: Double click the shortcut or double-click the application executable file. Double-click on the first network adapter you want to disconnect and reconnect. Right-click on the desired adapter to see the menu. Select the "Reconnect" option from the menu. Double-click on the icon to confirm that you wish to disconnect and reconnect the desired adapter. Click the "OK" button. Double-click on the second adapter you want to disconnect and reconnect. Right-click on the desired adapter to see the menu. Select the "Reconnect" option from the menu. Double-click on the icon to confirm that you wish to disconnect and reconnect the desired adapter. Click the "OK" button. Example of usage: Double-click on the shortcut to run the program. Select the adapter you want to disconnect and reconnect from the "Menu". Double-click on the icon to disconnect and reconnect the desired adapter. Click the "OK" button to save and exit the program.
